

AWS PreSeed Business Plan - Power

1. Executive Summary

Company: Power Energy GmbH
Location: Austria
Stage: Pre-Seed
Ask: €150,000

Mission: Building Austria's leading AI-powered energy orchestration platform that automatically optimizes battery storage, wallbox charging, and consumption for households and SMEs using dynamic tariffs.

Key Metrics:

- MVP Architecture: Complete ☒
- Regulatory Status: E-Control compliant ☒
- Target Market: €1.65B (AT households + SMEs)

2. Problem Statement

The Energy Challenge

- Dynamic Tariffs** - Austrian energy prices now fluctuate hourly (day-ahead market), but most consumers can't react manually
- Isolated Devices** - Battery storage, wallboxes, and heating systems operate independently
- Missed Savings** - €2,000-€5,000/year potential per household remains unused
- Regulatory Complexity** - EMS vs. Lieferant distinction confuses market entrants

Market Gap

No Austrian platform offers end-to-end energy orchestration with:

- Real-time Smart-Meter integration
- Day-ahead tariff optimization
- Device-level control (battery, wallbox)

3. Solution

Product Overview

Power = AI Energy Orchestrator for Austrian households & SMEs

Core Modules:

- Smart-Meter Gateway** - Ingests real-time consumption/production data
- Tarif-Engine** - Optimizes charging/discharging based on day-ahead prices
- Device Orchestrator** - Controls battery & wallbox for maximum savings

Value Proposition

Segment	Monthly Savings	Annual Savings
Household (PV + Battery)	€30-€70	€360-€840
Household (PV only)	€15-€35	€180-€420
SME (with peak management)	€120-€450	€1,440-€5,400

4. Market Analysis

TAM: €4.5B Austria

- Households with PV:** 180,000 × €900 = €162M
- SMEs with load management:** 45,000 × €450 = €20M
- Multi-unit buildings:** 12,000 × €300 = €3.6M

SAM: €1.65B (targetable)

- Urban households with smart meter
- SMEs in commercial zones
- New construction with EMS requirement

SOM: €8M (Year 3)

- 0.5% market penetration
- Focus: Vienna, Salzburg, Innsbruck

5. Business Model

Pricing Tiers

Tier	Price	MRR	Features
Basic	€9.90	€9.90	Tariff alerts, analytics
Pro	€19.90	€19.90	Auto-optimization, device control
Business	€49.90	€49.90	Multi-site, API, SLA

Unit Economics

Metric	Value
CAC (Customer Acquisition Cost)	€150
LTV (Lifetime Value, 10 years)	€2,400
LTV:CAC Ratio	16:1
Gross Margin	75%
Payback Period	8 months

Revenue Projection

Year	Customers	Revenue
1	500	€60K
2	3,000	€360K

6. Competition

Competitive Landscape

Company	Region	Strength	Weakness
Tesla	Global	Brand, scale	No AT regulation
EnBW	Germany	Market leader	DE only
aWATTar	Austria	Dynamic tariffs	No device control
oikon	Austria	Energy monitoring	No optimization
Power	Austria	Full orchestration	Early stage

Differentiation

- Only Austrian solution with E-Control compliance
- End-to-end: Smart-Meter → Tariff → Device control
- Made in Austria: Data residency, local support

7. Go-To-Market

Phase 1: Pilot (Q2-Q3 2026)

- 50 pilot households in Vienna
- Free tier in exchange for feedback
- Target: Validate savings claims

Phase 2: Launch (Q4 2026)

- Public launch of Basic/Pro tiers
- Partner channels: Solar installers, energy advisors
- Target: 500 customers

Phase 3: Scale (2027)

- Expand to Salzburg, Innsbruck, Graz
- B2B focus on SMEs
- Target: 3,000 customers

8. Team

Founding Team (To Be Assembled)

Role	Responsibility
CEO	Strategy, Funding, Regulatory, Partners
CTO	Architecture, Development, QA
Operations	Customer success, Support

Advisory Board

- Energy sector veterans (E-Control network)
- Technology advisors (cloud, AI)

9. Use of Funds

€150K PreSeed Allocation

Category	Amount	%
MVP Development	€80,000	53%
Pilot Operations	€40,000	27%
Regulatory/Legal	€20,000	13%
Team/G&A	€10,000	7%

Milestones (12 months)

Milestone	Target	Success Metric
M1: MVP Complete	Month 2	All modules functional
M2: Pilot Launch	Month 4	50 pilot users
M3: Pilot Validation	Month 8	80% savings confirmed
M4: Seed Ready	Month 12	€500K ARR pipeline

10. Risks & Mitigation

Risk	Probability	Impact	Mitigation
Regulatory change	Medium	High	Close E-Control dialogue
Hardware供应链	Low	High	Partner with established vendors
Competition	High	Medium	Focus on Austria, move fast
Customer acquisition	Medium	High	Partner channels, pilot validation

11. Financial Projections

Year 1 (2026)

Item	Amount
Revenue	€60,000
COGS	(€15,000)
Gross Margin	€45,000
OpEx	(€180,000)
EBITDA	(€135,000)

Year 2 (2027)

Item	Amount
------	--------

Revenue	€360,000
COGS	(€90,000)
Gross Margin	€270,000
OpEx	(€350,000)
EBITDA	(€80,000)

Year 3 (2028)

Item	Amount
Revenue	€1,200,000
COGS	(€300,000)
Gross Margin	€900,000
OpEx	(€600,000)
EBITDA	€300,000

12. Exit Strategy

Potential Exits

1. **Strategic Acquisition** - by EnBW, Wien Energie, or Tesla
2. **IPO** - if market leader position achieved
3. **Series A Bridge** - €2M at €10M valuation

Comparable Exits

- **Enpal** (DE): €350M Series D (2023)
- **Mytotalenergies**: €1.2B acquisition (2022)

Appendix

A. Regulatory Compliance

- ☒ E-Control EMS vs. Lieferant boundary defined
- ☒ Smart-Meter Daten format (EDIFACT)
- ☒ GDPR-compliant data handling

B. Technical Architecture

- ☒ Fastify REST API (10 routes)
- ☒ Next.js 14 Frontend (10 pages)
- ☒ PostgreSQL + TimescaleDB
- ☒ Kubernetes deployment ready

C. IP & Trademarks

- "Power" trademark application: Pending
- Algorithm IP: Proprietary optimization engine
